These Marking Instructions have been prepared by Examination Teams for use by SQA Appointed Markers when marking External Course Assessments. This publication must not be reproduced for commercial or trade purposes.

## Higher Chemistry (Revised)

### General information for markers

The general comments given below should be considered during all marking.

- 1 There are **no half marks** awarded
- 2 Marks should **not** be deducted for incorrect spelling or loose language as long as the meaning of the word(s) is conveyed.  
**Example:** Answers like 'distilling' (for 'distillation') and 'it gets hotter' (for 'the temperature rises') should be accepted.
- 3 A right answer followed by a wrong answer should be treated as a cancelling error and no marks should be given.  
**Example:** What colour is seen when blue Fehling's solution is warmed with an aldehyde?  
The answer 'red, green' gains no marks.
- 4 If a right answer is followed by additional information which does not conflict, the additional information should be ignored, whether correct or not.  
**Example:** Why can the tube not be made of copper?  
If the correct answer is related to a low melting point, 'It has a low melting point and is coloured grey' would **not** be treated as having a cancelling error.
- 5 Full marks are usually awarded for the correct answer to a calculation on its own; the part marks shown in the marking scheme are for use when working is given. An exception is when candidates are asked to 'Find, by calculation, .....'.  
**Example:** Calculate the mass of sodium chloride formed when 10g of sodium reacts with 10g of chlorine.
- 6 A mark should be deducted for incorrect or missing units **only when stated in the marking scheme**. No marks should be deducted for incorrect or missing units at intermediate stages in a calculation.
- 7 As a general rule, where a wrong numerical answer (already penalised) is carried forward to another step, no further penalty is incurred provided the result is used correctly. The exception to this rule is where the marking instructions for a numerical question assign separate "concept marks" and an "arithmetic mark". In such situations, the marking instructions will give clear guidance on the assignment of partial marks.
- 8 Ignore the omission of one H atom from a full structural formula provided the bond is shown.
- 9 A symbol or correct formula should be accepted in place of a name **unless stated otherwise in the marking scheme**.
- 10 When formulae of ionic compounds are given as answers it will only be necessary to show ion charges if these have been specifically asked for. However, if ion charges are shown, they must be correct. If incorrect charges are shown, no marks should be awarded.

- 11 If an answer comes directly from the text of the question, no marks should be given.

**Example:** A student found that 0.05 mol of propane, C<sub>3</sub>H<sub>8</sub> burned to give 82.4 kJ of energy.

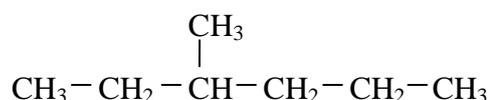

Name the kind of enthalpy change which the student measured.

No marks should be given for 'burning' since the word 'burned' appears in the text.

- 12 A guiding principle in marking is to give credit for (partially) correct chemistry rather than to look for reasons not to give marks.

**Example 1:** The structure of a hydrocarbon found in petrol is shown below.

Name the hydrocarbon.

Although the punctuation is not correct, '3, methyl-hexane' should gain the full mark.

**Example 2:** A student measured the pH of four carboxylic acids to find out how their strength is related to the number of chlorine atoms in the molecule. The results are shown.

Structural formula	pH
CH <sub>3</sub> COOH	1.65
CH <sub>2</sub> ClCOOH	1.27
CHCl <sub>2</sub> COOH	0.90
CCl <sub>3</sub> COOH	0.51

How is the strength of the acids related to the number of chlorine atoms in the molecule?

Although not completely correct, an answer such as 'the more Cl<sub>2</sub>, the stronger the acid' should gain the full mark.

- 13 Unless the question is clearly about a non-chemistry issue, eg costs in industrial chemistry, a non-chemical answer gains no marks.

**Example:** Why does the (catalytic) converter have a honeycomb structure?

A response such as 'to make it work' may be correct but it is not a chemical answer and the mark should not be given.

## 2012 Chemistry Higher

### Marking Scheme

#### Section A

1	C	11	B	21	B
2	B	12	D	22	D
3	B	13	B	23	C
4	C	14	C	24	B
5	D	15	B	25	D
6	D	16	A	26	A
7	C	17	B	27	A
8	C	18	D	28	D
9	D	19	A	29	A
10	A	20	A	30	C

Mark Scheme			Worth 0	
1	(a) (i)	Boron or Carbon or B or C or graphite or diamond	1	Silicon
	(ii)	Number of protons <u>increases</u> or <u>increased</u> atomic number or <u>greater</u> nuclear/positive charge (pull) or <u>greater</u> pull on (outer) electrons	1	Increased number of electrons or larger nucleus or stronger nucleus or any answer which does not indicate an <u>increase</u> in pull/charge
	(iii)	Lithium or Li	1	Li <sup>+</sup>
	(b)	Electrons are further from the nucleus or atomic size increases or extra energy level (1) Screening or shielding or explanation thereof (1)	2	Answers <u>only</u> stating that there are more electrons

Mark Scheme		Worth 0
2	<p><b>(a)</b> 4 or 4.0 (mg – units not required, ignore incorrect units)</p>	1
	<p><b>(b)</b> 288 g or 288000 mg</p> <p>Partial marks 288 or 288000 <b>(1)</b> Correct unit <b>(1)</b></p> <p>34.7 g (1) (awarded for correct unit) 34700 mg (1) (awarded for correct unit)</p>	<p>2</p> <p>34.7 mg (0)</p> <p>Do not award the unit mark for any values other than those stated unless working is shown.</p>

Mark Scheme	Worth 0
<p><b>3 (a) (i)</b> 5.75 or 5.77 (g – units not required, ignore incorrect units) <b>3</b></p> <p><b>Partial marks can be awarded using a scheme of two “concept” marks, and one “arithmetic” mark</b></p> <p>1 mark – for demonstration of <u>use</u> of the relationship between specific heat capacity, mass, temperature and heat energy/enthalpy eg <math>E_h = cm\Delta T</math> or <math>\Delta H = -cm\Delta T</math> This mark is for the concept, do not penalise for incorrect units or incorrect arithmetic. The value of 171 (kJ) would automatically gain this mark.</p> <p>1 mark – for demonstration of knowledge that the enthalpy of combustion of ethanol relates to the combustion of the gfm of ethanol. This mark could be awarded if the candidate is seen to be working out the number of moles of ethanol required (0.125 or 0.13) or if the candidates working shows a proportion calculation involving use of the gfm for ethanol (46) This mark is for demonstration of knowledge of this concept, do not penalise for incorrect units of incorrect arithmetic.</p> <p>1 mark – the final mark is awarded for correct arithmetic throughout the calculation <b>but</b> cannot be awarded unless the two concept marks have both been awarded.</p>	<p>Calculations involving <math>E_h</math> where candidates have taken <math>m</math> to be the mass of ethanol.</p> <p>Calculations involving <math>E_h</math> where candidates have taken <math>\Delta T</math> to be either 18 or 100°C.</p>

Mark Scheme		Worth 0
<p><b>3 (a) (ii)</b> Heat lost to surroundings <b>(1)</b></p> <p>Incomplete combustion (of alcohol) <b>(1)</b></p> <p>Ethanol impure <b>(1)</b></p> <p>Loss (of ethanol) through evaporation <b>(1)</b></p>	<b>3</b>	Evaporation of water
<p><b>(b)</b> 1 660 000 (kJ – units not required, ignore incorrect units)</p> <p>Partial marks</p> <p>1 mark for ratio <math>\frac{50}{0.00145}</math> or <math>\frac{50000}{1.45}</math> or 34500 or 34.5 appearing in working</p>	<b>2</b>	

Mark Scheme		Worth 0
<p><b>4 (a)</b> (Geraniol has) hydrogen bonding (between its molecules) <b>(1)</b></p> <p><b>or</b></p> <p>there are stronger intermolecular bonds (in geraniol) <b>(1)</b></p> <p><b>or</b></p> <p>stronger van der Waals' (in geraniol) <b>(1)</b></p> <p><b>or</b></p> <p>limonene only has London dispersion forces <b>(1)</b></p>	<b>1</b>	Geraniol contains –OH group (with no further mention of intermolecular forces)
<p><b>(b) (i)</b> aldehydes or alkanals</p>	<b>1</b>	
<p><b>(ii)</b></p> $\text{H}_3\text{C} - (\text{CH}_2)_8 - \begin{array}{c} \text{CH}_3 \\   \\ \text{C} \\   \\ \text{H} \end{array} - \begin{array}{c} \text{O} \\    \\ \text{C} \end{array} - \text{OH}$ <p>(Accept full or shortened structural formula)</p>	<b>1</b>	Structures where connectivity is clearly incorrect

Mark Scheme	Worth 0
<p data-bbox="277 212 757 240"><b>(c)</b> This is an open ended question</p> <p data-bbox="1115 180 1137 209" style="text-align: right;"><b>3</b></p> <p data-bbox="347 280 1025 443"><b>1 mark:</b> The student has demonstrated a limited understanding of the chemistry involved. The candidate has made some statement(s) which is/are relevant to the situation, showing that at least a little of the chemistry within the problem is understood.</p> <p data-bbox="347 483 1025 646"><b>2 marks:</b> The student has demonstrated a reasonable understanding of the chemistry involved. The student makes some statement(s) which is/are relevant to the situation, showing that the problem is understood.</p> <p data-bbox="347 686 1043 1054"><b>3 marks:</b> The maximum available mark would be awarded to a student who has demonstrated a good understanding of the chemistry involved. The student shows a good comprehension of the chemistry of the situation and has provided a logically correct answer to the question posed. This type of response might include a statement of the principles involved, a relationship or an equation, and the application of these to respond to the problem. This does not mean the answer has to be what might be termed an “excellent” answer or a “complete” one.</p>	<p data-bbox="1205 212 2007 411">The student has demonstrated no understanding of the chemistry involved. There is no evidence that the student has recognized the area of chemistry involved or has given any statement of a relevant chemistry principle. This mark would also be given when the student merely restates the chemistry given in the question.</p>

Mark Scheme	Worth 0
<p><b>5 (a)</b> 0.21 (g – units not required) <b>3</b></p> <p>Reading volume ethanol from graph, 110 (cm<sup>3</sup>) <b>(1)</b></p> <p>EITHER</p> <p>Calculation of (no of moles) <math>\frac{0.11}{24}</math> or <math>4.58 \times 10^{-3}</math> <b>(1)</b></p> <p>Calculation of mass <math>46 \times 4.58 \times 10^{-3} = \underline{0.21}</math> g <b>(1)</b></p> <p>OR</p> <p>Calculating (the mass of 1l) = <math>\frac{46}{24}</math> or 1.92 <b>(1)</b></p> <p>Calculating (the mass of 0.11l) = <math>0.11 \times 1.92 = \underline{0.21}</math> g <b>(1)</b></p>

Mark Scheme	Worth 0	
<p>6 (a)</p> $  \begin{array}{ccccccc}  & & \text{H} & & & \text{H} & \\  & &   & & &   & \\  \text{H} & - & \text{C} & - & \text{S} & - & \text{S} & - & \text{C} & - & \text{H} \\  & &   & & & & & &   & & \\  & & \text{H} & & & & & & \text{H} & &   \end{array}  $ $  \begin{array}{ccccccc}  & & \text{H} & \text{H} & & & \\  & & / & \backslash & & & \\  \text{H} & - & \text{C} & & \text{C} & - & \text{H} \\  & & \backslash & / & & & \\  & & \text{H} & & \text{S} & & \text{H} \\  & & & &    & & \\  & & & & \text{S} & &   \end{array}  $ <p>Or any structure for an expansion of the shortened structural formula <math>\text{CH}_3\text{S}_2\text{CH}_3</math> containing</p> <ul style="list-style-type: none"> <li>• 6 hydrogen atoms, valency 1</li> <li>• 2 carbon atoms, valency 4</li> <li>• 2 sulphur atoms, valency 2 or 4 or 6</li> </ul> <p>All Bonds must be shown</p>	1	Shortened structural formulae

Mark Scheme		Worth 0
<p><b>(b)</b></p> <p>First mark for naming the strongest type of intermolecular forces in H<sub>2</sub>S</p> <p>Permanent dipole - permanent dipole attractions (accept dipole/dipole) <b>(1)</b></p> <p>Second Mark for explaining how the intermolecular forces they have named arise.</p> <p>If permanent dipole-permanent dipole named, award mark for mention of electronegativities of S and H or diagram showing correct partial charges <b>(1)</b></p> <p>If London dispersion forces named, award mark for mention of instantaneous/induced/temporary dipoles/electron cloud wobbles or similar <b>(1)</b></p>	<p><b>2</b></p>	<p>Mention of Hydrogen bonding results in mark of 0 for whole question</p> <p>Polar bonding</p> <p>If van der Waals' named as the strongest intermolecular force, do not award any mark for explanation as this could be any one of several different types of intermolecular force.</p>

Mark Scheme			Worth 0
(c) (i)	pipette or burette	1	Measuring cylinder syringe
(ii)	a solution of exactly/accurately known concentration or exact concentration or precise concentration	1	

Mark Scheme	Worth 0
<p>(iii) <math>1.5 \times 10^{-3}</math> or 0.0015 (mol l<sup>-1</sup> – units not required) <b>3</b></p> <p><b>Partial marks can be awarded using a scheme of two “concept” marks, and one “arithmetic” mark.</b></p> <p>1 mark for knowledge of the relationship between moles, concentration and volume. This could be shown by any <u>one</u> of the following steps:</p> <ul style="list-style-type: none"> <li>• Calculation of moles Cl<sub>2</sub>(aq) eg  <math>0.010 \times 0.0294 = 2.94 \times 10^{-4}</math></li> <li>• Calculation of conc<sup>n</sup> H<sub>2</sub>S eg  <math>7.35 \times 10^{-5} / 0.05 = 1.47 \times 10^{-3}</math></li> <li>• Insertion of correct pairings of values for conc<sup>n</sup> and volume in a valid titration formula such as  <math display="block">\frac{C_1 V_1}{b_1} = \frac{C_2 V_2}{b_2} \quad \text{eg} \quad \frac{29.4 \times 0.010}{b_1} = \frac{C_2 \times 50.0}{b_2}</math></li> </ul> <p>1 mark for knowledge of the relationship between the number of moles of chlorine and H<sub>2</sub>S</p> <ul style="list-style-type: none"> <li>• 4:1 ratio</li> <li>• Insertion of values for balancing numbers in a valid titration formula such as  <math display="block">\frac{C_1 V_1}{b_1} = \frac{C_2 V_2}{b_2} \quad \text{eg} \quad \frac{C_1 V_1}{4} = \frac{C_2 V_2}{1}</math></li> </ul> <p>1 mark is awarded for correct arithmetic throughout the calculation. This mark can only be awarded if both concept marks have been awarded.</p>	

Mark Scheme		Worth 0
7	(a) 2.9	1
	(b) covalent	1
	(c) Cross at (2.6, 0.8) on graph	2
	<p>Difference in electronegativities</p> <p>Average electronegativity</p> <p>For calculation of <u>both</u> average electroneg. = 2.6 and diff. electroneg. = 0.8 <b>(1)</b>  For correctly plotting the point for the values candidate has calculated <b>(1)</b></p>	A point other than (2.6, 0.8) plotted with no statement of the values is worth 0 marks

Mark Scheme		Worth 0
8	<p><b>(a)</b> CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>CH<sub>2</sub>OH Or hexan-1-ol or hexanol</p> <p>Also accept structural formulae or names for hexan-2-ol or hexan-3-ol</p>	1
	<p><b>(b)</b> The further away from the end of the chain the O atom is, the lower the flash point or similar</p>	1

Mark Scheme		Worth 0
9	<p>(a) (i) ester link or carboxylate or ester <span style="float: right;">1</span></p> <p>(ii) Correctly drawn amino acid structure <span style="float: right;">1</span></p> $  \begin{array}{ccccccc}  & \text{O} & \text{NH}_2 & & \text{O} & & \\  &    &   & &    & & \\  \text{HO} & - \text{C} & - \text{CH} & - \text{CH}_2 & - \text{C} & & \\  & & & & & \text{OH} & \\  & & & & & / & \\  & & & & & \text{O} &   \end{array}  $ <p>(iii) Essential <span style="float: right;">1</span></p>	Structures where connectivity is clearly wrong
(b)	<p>(i) 69 – 70 (mg l<sup>-1</sup> – no units required. Ignore incorrect units) <span style="float: right;">1</span></p> <p>(ii) Sample of Y should be diluted or less of sample Y should be used or smaller sample of Y <span style="float: right;">1</span></p>	

Mark Scheme			Worth 0
10	(a) (i)	It is polar/has hydrogen bonding	1
	(b) (i)	Methyl methanoate	1
	(ii)	58(%)	1
	(c)	70(%)  1 mark is given for either calculating the theoretical yield, or for working out the numbers of moles of reactant and product formed. eg 1.35(g) or both 0.03 and 0.021  1 mark is given for calculating the % yield; either using the actual and theoretical masses, or using the actual number of moles of products and actual number of moles of reactant.	2  percentage yield = $\frac{0.945}{1.38} \times 100$ = 68.5%

Mark Scheme			Worth 0	
11	(a) (i)	3-methyl-butan-2-ol (with or without the hyphens)	1	3-methyl but-2-ol
	(ii)	$  \begin{array}{ccccccc}  & & & \text{CH}_3 & \text{H} & & \\  & & &   &   & & \\  \text{CH}_3 & - & \text{CH}_2 & - & \text{C} & - & \text{C} & - & \text{H} \\  & & &   &   & & & & \\  & & & \text{H} & \text{OH} & & & &   \end{array}  $ <p>Any correct structural formula for 2-methylpentan-1-ol</p>	1	Structures when connectivity is clearly wrong
	(b) (i)	$4\text{BF}_3 + 3\text{NaBH}_4 \longrightarrow 2\text{B}_2\text{H}_6 + 3\text{NaBF}_4$ (or multiples)	1	
	(ii)	-2168 (kJ mol <sup>-1</sup> )  1 mark for two from the three correct enthalpy change values: -36 kJ -1274 kJ 3 x -286 (= -858) kJ	2	+2168 without any working is worth 0

Mark Scheme		Worth 0	
12	(a) Diagram completed to show a suitable means of collecting and <u>measuring</u> volume of gas	1	Method drawn would not allow <b>volume</b> to be measured
	(b) (i) Water bath or heating mantle	1	Heating directly with bunsen
	(ii) The protein is denatured/intermolecular bonds broken/changes shape	1	Structure changes

Mark Scheme			Worth 0
13	(a)	<p><math>\text{MnO}_4^-/\text{H}^+</math> is not a strong enough oxidising agent.</p> <p>or</p> <p><math>\text{F}_2</math> would react with <math>\text{Mn}^{2+}</math></p> <p>or</p> <p><math>\text{F}_2</math> is below <math>\text{MnO}_4^-</math> in the electrochemical series</p>	1
	(b)	(i) initiation	1
		(ii) $\cdot\text{CH}_3 + \cdot\text{CH}_3 \longrightarrow \text{CH}_3\text{CH}_3$	1
		Or $\text{F}\cdot + \text{F}\cdot \longrightarrow \text{F}_2$	

Mark Scheme	Worth 0
